Occupational Health and Safety Management System

ISO 45001

It's the combination of factors and conditions that affect the health and security of the people who are effected from the operations of an organization.

Occupational Health and Safety Management System: A tool to address the issues of health and safety systematically in compliance with the overall strategies of the organizations and solve them within framework of a continual improvement approach.

propriate personnel; ready to emergencies; who monitors the performances and uses the results of such monitoring process to start the improvement activities; who audits, reviews and document its own operations.

İş Occupational Health and Safety Management System is an approach with which the

risks and hazards are identified in a systematic and scientific way; the required actions against such risks and hazards are taken for protection against accidents and other harmful effects on human health and safety due to various reasons during the normal course of business.

Health and Safety Management System: A tool to address the issues of health and safety systematically in compliance with the overall strategies of the organizations and solve them within framework of a continual improvement approach.

How OHS Management System Works?

1st Step: Get to know your customers and determine their way of perception

2nd Step: Plan how to meet the requirements of your customers

3rd Step: Implement your plan

4th Step: Monitor and control.

5th Step: Take action and develop your process.

OHS activities in our country reminds the use of personal protective devices and traditionally perceived as a job simply need-to-be-done. With the OHS system, the roles and responsibilities of the employees, executives, and supervisors are clearly defined and participation of the employees will be secured.

People who work with this system will be a part of system in an organization where due attention is given to OHS activities, risks are determined and minimized by appropriate measures, and where the goals are achieved by employing management programs, where OHS training are being offered to ap-

ISO 45001 STANDARD CLAUSES;
